

# The economical premium tire

## Continental Agricultural tires:

- powerful
- durable
- flexible for maximum soil protection

### DEVELOPMENT

- ➔ 2004- 2015: Mitas receives brand license and produces and sells Continental tires
- ➔ 2015: Sale of Mitas to Trelleborg (today Yokohama Group). As a result, the brand licenses were returned to Continental.
- ➔ 2017: A new start after 13 years with new products, investment in a new plant with a new team.
- ➔ 2019: The Continental TractorMaster tire wins DLG test and is DLG benchmarking leader in the premium agricultural tire segment.

Subsequently, the product range was continuously expanded, so that today all common dimensions including VF technology are available.

## important technologies

### CARCASS

#### N.flex Technologie

- Resistant and flexible at the same time
- Very good heat dissipation
- High impact absorption without breaking due to special nylon fabric
- Dimensionally stable and comfortable ride due to low shrinkage behavior of the nylon fabric

### BEAD

#### Bead Technologie

- Robust, compact, dimensionally stable
- Tires are easy to fit
- The rectangular core is optimized for high torques of tractors and rear-axle combine harvester tires.
- The Hexa.core design is a special development for the front tires of harvesters. The carcass material can better wrap around the core for better power transmission. Higher core strength and a more compact design are the result.

### LUG DESIGN

#### d.fine Technologie

- High lug overlap and smooth driving behavior
- Less vibration
- 5 % more lug surface area than standard tires
- Robust blocks increase stability, strength and fewer cracks
- Harmonious connection between lugs and lug space
